

Wax Home Care Instructions

Hot Tips to do after Waxing

- Apply a hair inhibitor to slow the regrowth of hair. Hair inhibitors can last up to two months.
- Apply soothing lotion to the waxed areas. Soothing lotion usually contains aloe vera and chamomile.
- Regular exfoliation (two - three times per week) helps to remove dead skin and avoids ingrown hairs.
- Moisturize the area with tea tree or lavender lotion after every shower as this has a soothing, healing and antibacterial effect.

Avoid the following for at least 24 hours after your brazilian wax session:

- heat sources, such as saunas, steam rooms, sun and heavy exercise
- exfoliating products such as AHA's and scrubs and loofas
- tight clothing
- Try to avoid hot baths/showers or sexual activity for 10 hours after a Brazilian wax session as your pores are open and vulnerable to irritation and infection.

How long does it last?

The results from a Brazilian wax may last between 3 to 6 weeks depending on your hair regrowth rate. Growth of hair is usually minimal during the first two weeks and noticeably increases in the third and fourth weeks. Hair growth is usually quicker in the summer months as heat stimulates hair growth. The length of time between treatments also increases with regular waxing.
